

Using Mybib.com to Create Your Works Cited Page

Mybib.com is a free online citation bibliography creation tool. Mybib is available as a Chrome extension and it allows you to search for sources or copy and paste citations from our databases. Once you have created all of your citations, you can download them as a word document, save to google drive, print or email them to yourself.

1. Go to mybib.com and create an account using your school email address and password. Your citation lists will be saved automatically and indefinitely.

2. Select "start new project" on the left. Give it a name and then select + add citation. You can search for websites, journals, books and so many other different types of sources. Mybib will often indicate if a source is credible or not.

*You can also copy and paste complete citations from our databases by selecting more and then copy/paste citation.

3. Once all of your citations have been entered, select "download works cited". You have many options, but downloading to Microsoft Word will allow you to see the format and print.
